

In-Flight Entertainment

Enhance your Passenger Experience with State-of-the-Art In-Flight Entertainment

Wirelessly stream content to seatback mounted integrated tablets with our in-flight entertainment (IFE) system. Designed to give your passengers the best entertainment experience possible, our IFE system has the ability to stream on-demand video and audio as well as playback from locally stored content in seatback SSDs. The system flexibility allows for easy retrofit and integration with your seats and uses the latest display, processor and Wi-Fi technology.

Our Delta Flight Products IFE System architecture allows for an increase in asset value over time, thanks to a design that makes it possible to introduce system updates and additional functionality as quickly as every month. Additionally, the weight savings of our system allow for a lower cost to carry.
