

DELTA FLIGHT PRODUCTS

Passengers with Reduced Mobility (PRM) Seat

At Delta Flight Products (DFP), one of our core commitments is making air travel accessible to all.

DFP, in collaboration with Air4All, a consortium of design and disability advocate organizations based in the UK, has developed an aircraft seat capable of retaining a customer's personal wheelchair, designed for versatility and convenience.

DFP and Air4All are the first in the industry to innovate a PRM seat solution that does not reduce passenger seat count and bring it to reality.

KEY FEATURES

- The seat features two modes: a typical seating mode and a PRM mode that quickly and smoothly converts to accommodate powered wheelchairs.
- This transformation takes roughly 90 seconds as the seat retracts, making room for a powered wheelchair to lock in securely.
- The design keeps typical passenger amenities like the headrest, tray table, and maintains a consistent aesthetic.

Winner of the 2024 APEX/IFSA Innovation Award for Best Cabin
